This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claims 1-59 (Cancelled).

Claim 60 (Currently Amended):   A system for managing, ~~by a primary shop,~~ orders received from a first shop and orders placed with a second shop comprising:

communication means for communicating data indicating statuses of ~~orders received and placed,~~ orders received, and orders placed; and

display control means for controlling display on display means of a combination of ~~an icon corresponding to a~~ management ~~item~~ items and data indicating a status of the management ~~item~~ items ~~represented by the icon~~ included in icons which are for discriminating the orders received or the orders placed,

wherein said display control means controls displaying such as the management items included in the icon are not displayed, in case where the orders received or the orders placed are not in existence, and displays the icon.

~~wherein said display control means determines actively whether data input by said communication means is of an order received and placed, an order placed, or an order received, and controls actively display of a combination of an icon corresponding to a management item in accordance with a determination result and data indicating a status of the management item represented by the icon.~~

Claim 61 (Cancelled).

Claim 62 (Currently Amended):   The system according to claim 60, wherein the data indicating ~~the~~ a status of the management ~~item~~ items is a number of ~~processed~~ orders received or

-2-

orders placed ~~corresponding to a management item~~.

Claim 63 (Currently Amended): The system according to claim 60, wherein <u>each of</u> the management ~~item~~ <u>items</u> is displayed as "expected", "orders determined", "delayed", "divided orders", "orders modified", "inspection in progress" or "acceptance".

Claim 64 (Currently Amended): The system according to claim 60, wherein <u>each of the</u> ~~a~~ management ~~item~~ <u>items</u> is capable of being added, changed or deleted.

Claim 65 (Currently Amended): The system according to claim 60, wherein the data indicating <u>the</u> a status of the management item is updated upon downloading.

[Claim 66 (Cancelled).]

Claim 67 (Currently Amended): The method for managing, ~~by a primary shop,~~ orders received from a first shop and orders placed with a second shop comprising:

a communication step of communicating data indicating statuses of ~~orders received and placed,~~ orders received, and orders placed; and

a display control step of controlling to display on display means a combination of ~~an icon corresponding to a~~ management ~~item~~ <u>items</u> and data indicating a status of the management ~~item~~ <u>items</u> ~~represented by the icon,~~ <u>included in icons which are for discriminating the orders received or the orders placed,</u>

<u>wherein said display control step controls displaying such as the management items included in the icon are not displayed, in case where the orders received or the orders placed are not in existence, and displays the icon.</u>

~~wherein said display control step comprises determining whether data input by said communication step is of an order received and placed, an order placed, or an order received, and processing display a combination of an icon corresponding to a management item in accordance~~

-3-

~~with a determination result and data indicating a status of the management item represented by the~~

~~icon, and orders of parts received and orders of parts placed are managed between a plurality of~~

~~computers.~~

Claim 68 (Cancelled).

Claim 69 (Currently Amended): A storage medium storing program modules of a method executable on a computer for managing~~, by a primary shop,~~ orders received from a first shop and orders placed with a second shop, wherein the program modules include:

a module for communicating data indicating statuses of ~~orders received and placed,~~ orders received, and orders placed; and

a display control module for controlling display on display means of a combination of ~~an~~ ~~icon corresponding to a~~ management ~~item~~ items and data indicating a status of the management ~~item~~ items ~~represented by the icon,~~ included in icons which are for discriminating the orders received or the orders placed,

wherein said display control module controls displaying such as the management items included in the icon are not displayed in case where the orders received or the orders placed are not in existence, and displays the icon.

~~wherein said display control module determines whether data input by said communication~~ ~~module is of an order received and placed, an order placed, or an order received, and executes~~ ~~processing to display a combination of an icon corresponding to a management item in accordance~~ ~~with a determination result and data indicating a status of the management item represented by the~~ ~~icon.~~

Claim 70 (Currently Amended): A system for managing orders received and orders placed for parts comprising:

-4-

first display control means for controlling a first display of a plurality of management items, wherein the first display indicates current statuses of ~~for~~ an order received and/or ~~for~~ an order placed;

selection means for allowing selection of a plurality of management items out of the displayed plurality of management items for the order received or the displayed plurality of management items for the order placed; and

second display control means for controlling a second display on the display means of data corresponding to the plurality of management items selected by said selection means in a form of a graph, which has a first axis for representing date, a second axis for representing the selected plurality of the management items, and a third axis for representing the number of the orders received and/or the orders placed, ~~in relation to the selected plurality of management items~~ together with the management items controlled to be displayed by said first display control means.

Claim 71 (Original):   The system according to claim 70, wherein the data corresponding to the plurality of management items are numbers of orders, and said second display control means controls display of the numbers of orders in correspondence with management items and date as a three-dimensional display.

Claim 72 (Original):   The system according to claim 70, further comprising input means for inputting an initial date for setting up in the graph and the number of days for setting a period in the graph.

Claim 73 (Original):   The system according to claim 72, wherein the number of days has a default value of five days as a reference number of days for managing orders received and orders placed.

Claim 74 (Original):   The system according to claim 72, further comprising third display

-5-

control means for displaying setting means for switching and setting a data update date and a parts delivery date as the initial date for setting up in the graph.

Claim 75 (Original):   The system according to claim 71, further comprising fourth display control means for displaying switching means for switching a display angle of the graph displayed in accordance with input information.

Claims 76 – 78 (Cancelled).

Claim 79 (Currently Amended):   A method for managing orders received and orders placed for parts comprising:

a first display control step of controlling a first display of a plurality of management items, wherein the first display indicates current statuses of for an order received and/or for an order placed;

a selection step of allowing selection of a plurality of management items out of the displayed plurality of management items for the order received or the displayed plurality of management items for the order placed; and

a second display control step of controlling a second display on the display means of data corresponding to the plurality of management items selected by said selection step in a form of a graph, which has a first axis for representing date, a second axis for representing the selected plurality of the management items, and a third axis for representing the number of the orders received and/or the orders placed, in relation to the selected plurality of management items together with the management items controlled to be displayed by said first displayed display control step.

Claims 80 – 81 (Cancelled).

Claim 82 (Currently Amended):   A storage medium storing program modules of a method executable on a computer for managing orders received and orders placed for parts, wherein the

-6-

program modules include:

a first display control module for controlling a first display a plurality of management items

together with data indicating current status of numbers of incidents for an order received and/or for

an order placed;

a selection module for allowing selection of a plurality of management items out of the

displayed plurality of management items for the order received or the displayed plurality of

management items for the order placed; and

a second display control module for controlling a second display on the display means of

data indicating numbers of incidents corresponding to the plurality of management items selected

by said selection module as daily data in a form of a three-dimensional graph, which has a first axis

for representing date, a second axis for representing the selected plurality of the management items

and a third axis for representing the number of the orders received and/or the orders placed, in

relation to the selected plurality of management items together with the management items

controlled to be displayed by said first display control module.

Claim 83 (Currently Amended):   The system according to claim 70, further comprising: A system

for managing orders received and orders placed for parts comprising:

first display control means for controlling display of a plurality of management items for an

order received and/or for an order placed;

selection means for allowing selection of one or all of the management items for the order

received or for the order placed;

second display control means for controlling display on display means of information of

orders received and placed for the management item or items selected from the displayed

management items in a form of a graph; and

additional selection means for, when one management item is selected by said selection means, allowing to additionally select a management item other than the selected management item using contents displayed by said second display control means.

Claim 84 (Original):   The system according to claim 83, wherein said first display control means controls display of a combination of an icon indicating an order received or an order placed as a management item and the number of data indicating a status of the order received or the order placed.

Claim 85 (Original):   The system according to claim 83, wherein said first display control means controls display means which allows to collectively select all the management items for an order received or an order placed.

Claim 86 (Original):   The system according to claim 83, wherein said second display control means comprises a function for displaying a selected management item out of the management items together with a management item selected by said additional selection means in a form of a table.

Claim 87 (Original):   The system according to claim 83, wherein said second display control means comprises a function for displaying an icon corresponding to the selected management item or items in a form of a table.

Claim 88 (Original):   The system according to claim 83, wherein said second display control means comprises a function for changing a display position on the display means in response to a selection by input means.

Claim 89 (Cancelled).

Claim 90 (Currently Amended): <u>The method according to claim 79, further comprising:</u> A method for managing orders received and orders placed for parts comprising:

-8-

~~a first display control step of controlling display of a plurality of management items for an order received and/or for an order placed;~~

~~a selection step of allowing selection of one or all of the management items for the order received or for the order placed;~~

~~a second display control step of controlling display on display means of information of orders received and placed for the management item or items selected from the displayed management items in a form of a graph; and~~

an additional selection step of, when one management item is selected by said selection step, allowing to additionally select a management item other than the selected management item using contents displayed by said second display control step.

Claim 91 (Original): The method according to claim 90, wherein said first display control step controls display of a combination of an icon indicating an order received or an order placed as a management item and the number of data indicating a status of the order received or the order placed.

Claim 92 (Original): The method according to claim 90, wherein said first display control step controls display means which allows to collectively select all the management items for an order received or an order placed.

Claim 93 (Original): The method according to claim 90, wherein said second display control step comprises a function for displaying a selected management item out of the management items together with a management item selected by said additional selection means in a form of a table.

Claim 94 (Original): The method according to claim 90, wherein said second display control step comprises a function for displaying an icon corresponding to the selected

-9-

management item or items in a form of a table.

Claim 95 (Original):   The method according to claim 90, wherein said second display

control step comprises a function for changing a display position on the display means in

response to a selection by input means.

Claim 96 (Currently Amended):   The storage medium according to claim 83, further

comprising: A storage medium storing program modules of a method executable on a computer for

managing orders received and orders placed for parts, wherein the program modules include:

a first display control module for controlling display of a plurality of management items for

an order received and/or for an order placed;

a selection module for allowing selection of one or all of the management items for the

order received or for the order placed;

a second display control module for controlling display on the display means of information

of orders received and placed for the management item or items selected from the displayed

management items in a form of a graph; and

an additional selection module for, when one management item is selected by said selection

module, allowing to additionally select a management item other than the selected management

item using contents displayed by said second display control module.
